1   GCspy: an adaptable heap visualisation framework   85%

Tony Printezis , Richard Jones
**ACM SIGPLAN Notices , Proceedings of the 17th ACM
conference on Object-oriented programming, systems, languages,
and applications** November 2002
Volume 37 Issue 11
GCspy is an architectural framework for the collection, transmission,
storage and replay of memory management behaviour. It makes new
contributions to the understanding of the dynamic memory behaviour
of programming languages (and especially object-oriented languages
that make heavy demands on the performance of memory managers).
GCspy's architecture allows easy incorporation into *any* memory
management system: it is not limited to garbage-collected languages.
It requires only small change ...

2   MPICH-V: toward a scalable fault tolerant MPI for volatile nodes   82%

George Bosilca , Aurelien Bouteiller , Franck Cappello , Samir Djilali
